Staying secure online

Cyber security isn't only for people who work in IT or might be good with computers. It's everyone's responsibility – including yours. When cyber criminals target your service or the people who use it then you become the last line of defence.

Introduction

As a social service worker, either now or in the future, you'll have access to digital devices as part of your job. It is necessary to protect and safeguard these devices and the information you have access to. We built this learning resource to help you with this.

Watch the video about staying safe online and then choose a scenario from the options below to get started.

Remember: If you or someone you know becomes the victim of a cyber attack, report it and ask for help from Police Scotland by calling 101.

Get started

Choose one of the scenarios below to get started. The interactive videos may not work on some smartphones.

Fake tech support

Mobile working

Hacking Humans Podcast

Each week the CyberWire's Hacking Humans Podcast looks behind the social engineering scams, phishing schemes, and criminal exploits that are making headlines and taking a heavy toll on organizations around the world. We talk to social engineering experts, security pros, cognitive scientists, and those practiced in the arts of deception (perhaps even a magician or two). We also hear from people targeted by social engineering attacks and learn from their experiences.
